Swiss DolorClast® at OLYMPIC GAMES 2008 in Beijing

SWISS_DOLORCLAST.CH

We are happy to inform you that the Beijing Organization Committee (Game Services Department) of the Olympic Games 2008 has entitled the Swiss DolorClast® to serve the international sports athletes with shockwave treatments if requested.

This is a real honour as the committee announced further on that only four companies were selected to provide medical devices and equipment for the Olympic medical service. The four companies are Johnson & Johnson, GE, Kodak and EMS Electro Medical Systems SA.

We take this fantastic chance and will be present with a team and several Swiss DolorClast® devices in the Beijing policlinic taking care of the athletes and spreading the word about the success of the shockwave treatment with the Swiss DolorClast® during the period 8th August to 24th August 2008.
